

## INSTALL A LOW-FLOW FAUCET AERATOR

You can save money on water use by simply replacing a low-flow faucet aerator.

Tools required : Wrench

Materials Required : Faucet aerator (rated less than 2.2 gallons per minute for kitchen and 1.5 – 0.5 gallons per minute for bathrooms)

Estimated time taken: 5 minutes

Project cost: ~\$2.00

Estimated energy savings / Payback period: 30% to 90% in water savings.

### HOW TO

Use a wrench to loosen the old faucet head, then unscrew and remove the old faucet head. Replace with the new faucet aerator. Make sure the new faucet aerator is screwed on snugly, but not too tight.

You are done! You can cut down on your faucet output by up to 18,615 gallons of water annually. Saving water is easy and inexpensive.
